The Republic of Georgia's National Centre of Manuscripts in 2012–2014 implemented the project "Digitalization and Database of Original Copies of Historical Documents Preserved in National Centre of Manuscripts", funded by the Shota Rustaveli National Scientific Foundation. As a result, over 5,000 original documents, from 40,000 that are preserved in the Centre, were described in the database and digitized. These 5,000 documents are already available for scholars and other interested persons on the Internet.
