SCAT

is a digital corpus of Old Church Slavonic hagiographic texts of the 15th–17th centuries created by the Department of Applied Linguistics of St. Petersburg State University. The texts are encoded in XML according to a formal division by pages, lines and words. At the same time it is possible to divided the texts to reflect their content structure since they were written in accordance with certain rules. Encoding of this structure facilitates search and further analysis of the texts.
