The St. Petersburg Corpus of Hagiographic Texts (SKAT): an XML format for encoding linguistic information and the site's search interface

Irina V. Azarova, Elena L. Alexeeva St. Petersburg State University, St. Petersburg, Russia

The St. Petersburg Corpus of Hagiographic Texts contains 52 Russian texts (500,000 words) from the 16th and 17th centuries. So far 13 texts have been published online in PDF and XML formats. Texts are encoded according to TEI guidelines (P4). Search by stemming is available, and the query syntax allows entire word forms or letter combinations and their position (beginning, middle, or end) to be specified.
